REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Examiner considers the disclosed method, including a method step of deliberately treating with air stripping until air stripping is no longer practically effective, or deliberately air stripping until the contaminant is reduced by more than 50% of its original level, before beginning chemical oxidation, while sequentially introducing a chemical oxidizing agent to the soil during or after the air stripping step, as an inventive step over the prior art of record. The exact chemical oxidant would be selected based on regulatory, site and contaminant requirements. Especially in view of applicant's arguments, the "in sequence" designation of the steps is given great weight, and all elements of each step must be performed before proceeding to the next step. For example, the step of hot air injection is continued until contaminant reduction by more than 50% is achieved, as recited, and only then can step (C) commence. A trenching tool or soil mixing device is considered to have some structure to actually churn or comminute soil in situ, not just to insert gases or liquid into soil.

2. Examiner reviewed applicant's 6543963, especially col 5 lines 13-38, which teach a method which is inherent in the apparatus. However, there is no double patenting issue as no method steps were claimed.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
